

csv2shp - A simple tool to convert csv files to shape files

Wilson Seron¹, Onofre A. Candido²

Federal University of São Paulo ¹
Brazilian National Center for Monitoring and Early Warning of Natural Disasters ²

São José dos Campos, May 2018

Motivation

What is it? and What is it for?

- It is a tool for convert csv files to shape files
- You can create shape files with a single command!

Figure: Csv file to shape file

Advantages

A simple tool, a single command

Figure: Advantages of csv2shp tool

When to use?

Is this tool useful when?

■ I do not need spatial data manipulation

■ I do not need queries

Figure: GIS model(adapted) Source (www.landsurveys.net.au)

Requirements

■ Python3

■ GDAL library

Figure: Requirements for use csv2shp

Input File example

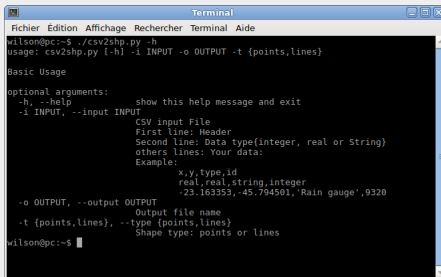

CSV input file with header and data type

```
walk_points.csv x
1 id,x,y,degree,wDegree,pagerank,closeness,betweenness,cc,eigenvecto,group
2 integer,real,real,integer,real,real,real,real,real,integer,
3 1717,730086.456813,7560530.33272,8,0,0.000966933614549456,0.001086267264391641,1633.0227098361697,0.42857142857142855,4.683340764456623e-05,0,

```

Figure: Region of Nova Friburgo - Rio de Janeiro (Brazil)

Usage

```
$ ./csv2shp.py -i input.csv -o output -t {points,lines}
```

```
Terminal
Fichier Edition Affichage Rechercher Terminal Aide
wilson@pc:~$ ./csv2shp.py -h
usage: csv2shp.py [-h] -i INPUT -o OUTPUT -t {points,lines}

Basic Usage

optional arguments:
  -h, --help            show this help message and exit
  -i INPUT, --input INPUT
                        CSV input File
                        First line: Header
                        Second line: Data type(integer, real or String)
                        others lines: Your data:
                        Example:
                            x,y,type,id
                            real,real,string,integer
                            -23.163353,-45.794501,'Rain gauge',9320
  -o OUTPUT, --output OUTPUT
                        Output file name
  -t {points,lines}, --type {points,lines}
                        Shape type: points or lines

wilson@pc:~$
```
